

# Forwarding/Stuffing

Shipping in containers is an economical and safe way of shipping most types of cargo. But putting cargo in a container also involves a constant risk of moisture damage for almost every kind of cargo on every voyage.

is a reliable partner with our head office in Sweden and an integrated, global supply chain. We have specialist following the specific needs in each industry and with our concept Peace of Moisture Mind® , we can offer you the most suitable moisture protective solutions.

You don't have your own goods to protect. However, your customers rely on you to stuff and/or ship their goods in a safe way. Moisture damage protection is often something that everybody thinks that somebody else is taking care of. And the problems don't get addressed in a preventive way. Instead, when the damages occur, everyone is blaming someone else for the consequences. By joining forces in combining stuffing and shipping expertise with moisture protection expertise we can suggest the best possible solution for your customers.

At we believe moisture damage protection to be a "value add offer" for your brand. In the eyes of your customers, you are respected for your professionalism as you address the problem and make them aware of it. It will also provide you with a source for increased income. But most important – the cargo of your customers is safe and the entire value chain is saving money. And the impact on the environment is reduced! The use of desiccants to absorb excess moisture during shipping is a much more cost-efficient solution. Our desiccants are based on calcium chloride, which widely outperforms traditional methods.

## Typical moisture damages
