Shipping in containers is an economical and safe way of shipping most types of cargo. But putting cargo into a container also involves a constant risk of moisture damages for almost every kind of cargo on every voyage.

is a reliable partner with our head office in Sweden and an integrated, global supply chain. We have specialists following the specific needs in a wide range of industries so we can offer you effective moisture protective solutions.

ABSORINSIGHT

Expensive and sensitive merchandise with important information, often packed in box with a strong brand image. These are just some of the arguments for having a solid moisture damage protection in place. Given the sensitive type of products, a peeled outer label with very important information must be avoided. And even if the product itself is undamaged, a peeled label creates consumer uncertainty, which often results in unnecessary waste. Collapsed packaging generates extended un-loading time and may even have to be scrapped. Which eventually impacts the EBIT.

An easy and much more cost-efficient solution is to use desiccants to absorb the excess moisture during shipment, meaning goods arriving in the same condition as loaded. By using container desiccants to absorb the excess water the moisture damages can be eliminated. Our desiccants are based on highly effective, non-toxic and environmentally friendly calcium chloride which is one of the most hygroscopic when it comes to absorb moisture from the surrounding air. Absortech offer the clever installation accessories that comes with AbsorRange™ a container can be dressed in minutes. And cut installation time means improved profit.

Typical moisture damages

-  Mould and mildew
-  Bad or changed smell
-  Damaged packaging
-  Peeling labels
-  Collapsed packaging
